Job Application for Web and Database Developer

Dear Ms. Ching,

It is my pleasure to submit my resume for Web and Database Developer. I am a physics graduate from UH Mānoa and a self-taught web-developer eager to use my five years of programming experience to support the improvement of public education in the state of Hawai'i.

I first learned computer programming and web development in high school. In my freshman and sophomore years in UHM, I worked in a bioinformatics lab as an assistant analyst. During that time, It was my privilege to design and maintain a MySQL database of genetic elements and to create a public front end for it using PHP programming language on an Apache web server. More recently, I completed an online degree on Udacity.com focused on Front-End web development using HTML5, CSS3, and JavaScript. I was also introduced to techniques of website optimization. I have made some of my projects available on my personal portfolio website at tahahojati.github.io.

The prospect of using my self-taught skills in order to help the students and researchers in the state of Hawai'i excites me. I hope to use my time as a web developer to hone my skills and I hope to meet educators who will inspire me to work harder and to contribute more to the academia and the state of Hawai'i.

Thank you in advance for your consideration.

Sincerely,

Taha Pourjalali
