Job Application for [position]

Dear Sir/Madam,

It is my pleasure to submit my resume for the [position] position. I am a physics graduate and a self-taught developer and I think I may be the hire that you are looking for.

In college, I was interested in the applications of computing in sciences. In my freshman and sophomore years, I worked in a bioinformatics lab, trying to computationally date the genetic mutations in the genome of maize. During that time, I wrote numerous programs using a mix of C, Perl, and R. I also learned php to create a website to showcase our findings. Later, I used my programming knowledge to write a GUI software using C++ and Root platform for analyzing data gleaned from a physics experiment. The experiment aimed to discover dark matter; unfortunately, no luck!

Since graduation, I have been working and gaining experience as a developer for several companies, have supplemented my education by taking online courses covering Android development, algorithm analysis, OS design, and AWS. I have also challenged myself by participating in Hackathons and by completing personal projects in my free time. You can find a list of my certificates in my resume and you may view some of my projects on my website at **tpourjalali.com**.

Thank you in advance for your consideration. I look forward to talking further with you about how my background might fit your company's current needs.

Best,

Taha Pourjalali
